**At Huhtamaki Tailored Packaging we deliver innovative solutions that help address complex and challenging needs to grow with the market and unlock value for our customers.**

**Our Future Friendly range has been created with sustainability at its core.**

### **This is big. As big as the planet.**

Give your customers extra reasons to love your brand, with the food packaging range that loves the planet.

And there's a simple reason why.

With the Future Friendly range, you can package your delicious food and drinks sustainably, to build your brand responsibly.

How you'll minimise your environmental impact is straightforward too.

Wherever possible, these food packaging products are made from plant based materials. Specifically, bamboo and sugarcane – two resources that grow so fast, they're classed as rapidly renewable. This means you can give your customers peace-of-mind that your food packaging is made from sustainable and responsible sources.

In addition to starting their life sustainably, many Future Friendly products end their life that way too. You'll find paper-board boxes, paper twisted handle bags and paper straws, all of which your customers can happily recycle.

**Get to know how sustainability can enhance your brand.  
Choose the food packaging range that's chosen the planet.**

# Sustainability

Sustainable development meets the need of the present without compromising the ability of the future generations to meet their own needs.

Sustainability is doing more with less.

Sustainability is an integrated part of our functions, combining environmental protection, social equity and economic efficiency. Our objective is to develop more sustainable packaging solutions wherever we can to meet customer demand for environmentally optimal packaging.

**We believe packaging can help deliver sustainability by:**

**Reducing resource  
usage and  
product wastage**

**Lowering health  
risks**

**Improving economic  
efficiency**

# Terminology

## Recyclable:

These products can be reprocessed, and the resulting material is manufactured into new products.

## Re-pulpable:

This refers to the degree to which paper materials can be converted back into pulp during the recycling process to form new fibre sheets.

## Renewable:

Made from natural resources which replenish to overcome resource depletion caused by usage and consumption, either through biological reproduction or other naturally recurring processes in a finite amount of time in a human time scale.

## Rapidly renewable:

Materials that are natural and have harvest cycles of under 10 years.

## Industrially compostable:

This product can be composted in a industrial composting facility. An industrial compost facility is a place where the perfect balance of heat, moisture, and oxygen is created to break down organic and plant-based materials.

## Home compostable:

These products can be placed in a home compost bin or the green bins where it will decompose and become soil within a measured period of time. Every component and material used in the packaging will break down and decompose into the soil.

## PET:

Polyethylene terephthalate (PET) is widely recycled and can be sorted in waste management systems. It is food safe, provides excellent clarity and is crack resistant.

## rPET:

Recycled polyethylene terephthalate (RPET) is made by converting post consumer waste into rPET. rPET can be widely recycled and can be sorted in waste management systems. It is a more sustainable alternative to regular PET.

## PP:

Polypropylene (PP) floats in water so it can be easily sorted by waste management companies who typically rely on float-sink tanks to separate polymers and to remove contaminants.

## PLA:

Polylactic acid (PLA) packaging is produced from renewable feedstock (cornstarch), is compostable in industrial composting facilities. Closed loop composting is required. Recycling is possible in dedicated facilities using closed loop systems.

## CPLA:

Crystallize Polylactic acid (CPLA) packaging is produced from modified PLA. The PLA must go through a crystallisation process in order for them to withstand high temperatures. CPLA is compostable in industrial composting facilities. Closed loop composting is required. Recycling is possible in dedicated facilities using closed loop systems.

# Bamboo

Huhtamaki Tailored Packaging utilises one of the most sustainable materials available, bamboo.

Bamboo grows so fast it's classed as a rapidly renewable resource; in fact, an entire bamboo forest can grow in just a few years. Bamboo regenerates from its roots. So, for a new crop to grow, it doesn't need replanting. Bamboo's strength and heat-resistance make it perfect for producing sustainable and highly-functional foodservice products.

Packaging sustainably with bamboo products allows your foodservice businesses to:

- Reduce your reliance on harvesting wood and paper for food packaging items such as bowls, cups, containers and more
- Increase your reliance on a rapidly renewable resource; bamboo grows so fast – compared to trees – it's classified as rapidly renewable

# Sugarcane

To make the Future Friendly range from plant-based materials, Huhtamaki TP reclaims vast quantities of sugarcane pulp, also known as bagasse. Bagasse is a sugar production by-product.

Once the sugarcane's juice is squeezed out, the tough, fibrous pulp remains. Because it's a by-product, bagasse is frequently discarded. However, Huhtamaki TP reclaims sugarcane bagasse and uses it to make Future Friendly plates, bowls, trays, hamburger clamshells and more.

Packaging sustainably with sugarcane products allows your foodservice businesses to:

- Reduce your reliance on non-renewable plastics, such as styrofoam, by replacing it with a sustainable alternative
- Increase your reliance on a resource that's a reclaimed by-product, which doesn't require a heavy investment of new resources to produce

# Paper Cups

We know what goes into our cups, how they are made and responsible routes for our products. Where it's sourced is as important as where it ends up.

- We are proud of our sourcing and corporate social responsibility credentials
- The material used in our paper cups is predominantly virgin wood fibre (also known as primary fibre) that has not previously been used in the manufacture of paper board
- We don't use recycled paper for food contact. This is dictated by our interpretation of legislation and of guidelines set by the European Food Safety Authority
- Fibre is classified as a renewable natural resource
- Our cups are lined with corn-starch, PLA, a rapidly renewable alternative to regular plastic linings
- We have single wall and double wall cups available in white, bamboo and our print series with CPLA lids to match

# Containers

## Sugarcane hinged containers

Made from rapidly renewable resources, our Future Friendly Sugarcane Hinged Containers are available in a wide range of shapes and sizes to meet your needs including Burger Clam, Snack Pack, Small or Large Dinner Packs and Three Compartment designs.

### Features and Benefits

- Reduce your usage of non renewable resources such as foams and plastics.
- Sugarcane is classified as rapidly renewable because it grows fast.
- Sugarcane bagasse is a by-product and does not require heavy investment of new resources to produce.

SCC1

## Sugarcane Food Trays

Our Future Friendly Sugarcane Food Trays are strong, durable and reliable. They are made from natural sugarcane fibre, making them a better alternative to foam and plastic trays.

### Features and Benefits

- Moisture resistant in cold applications making it safe in the freezer and refrigerator.
- Reduce your usage of non renewable resources such as foams and plastics.
- Sugarcane is classified as rapidly renewable because it grows so fast.
- Sugarcane bagasse is a by-product and does not require heavy investment of new resources to produce.

# Hot cups & accessories

# What is PLA lining?

Our Future Friendly range of cups are lined with PLA. PLA stands for Polylactic Acid. PLA is made from rapidly-renewable natural sources such as corn starch or sugarcane. This makes it a great alternative to regular plastic linings. Our PLA cups are also certified compostable to EN13432 in industrial facilities where these exist. Australian standard (AS4736) is pending.

To match our coffee cups we have a range of lids made from CPLA. CPLA is crystallised PLA, PLA has a low melt point so where more heat resistance is needed we use a crystallised form.

## How to choose the right cup

### Single wall cups

Single wall paper coffee cups are a cost effective and versatile way to cater for beverages. These cups are used in cafes, clubs, colleges and offices. Our cups have a food grade paper lining made from corn-starch, PLA, a rapidly renewable alternative to regular plastic linings.

### Double wall cups

Double wall paper coffee cups have an additional outer wall acting as a heat barrier. The cups are comfortable to hold in the hand, while the temperature of the drink is retained for longer. These cups are also lined with corn-starch, PLA.

Single wall

Double wall

# Cups that Connect

In Aboriginal culture, the land was created and given life through the journeys of the 'Spirit Ancestors' during the period called the 'Dreamtime' or 'Dreaming'. The 'Spirit Ancestors' are symbolised by animals which are the sacred totem animal of a tribal group. Each clan family belonging to the group is responsible for the protection and care of their sacred totem animal. The artworks featured in Huhtamaki's new range of cups illustrate the tribe area and their sacred totem animals.

For more information about this range is available on our website: [www.futurefriendlypackaging.com.au](http://www.futurefriendlypackaging.com.au)  
[www.davidliddiardgroup.com](http://www.davidliddiardgroup.com)

## Goanna Artwork

Each dotted circle represents a clan, all of these clans are connected by tracks (dotted lines). The Goanna is the sacred totem animal of the tribe and it is protected from being hunted within this area. If the Goanna travels beyond these tracks then he can be hunted.

## Dolphin Artwork

The three circles around the artwork represent seaside tribes that run along the ocean, the dotted lines are the tracks from one tribe to the next. The Dolphin illustrated in the centre of the artwork is their sacred totem animal. The Indigenous people of these clans will never hunt the dolphins, they will swim and co-exist with them.

## True Fill Indigenous collection hot cups

Compostable and certified to EN13432 in industrial facilities where these exist. Australian Standard (AS4736) pending.

### Features and Benefits

- Lined with corn-starch, PLA, a rapidly renewable alternative to regular plastic linings

# Size chart

**\*Our 8oz uni size allows you to use the same lid for 8, 12 and 16oz cups.**

## How strong do you like to drink your coffee?

The size of a coffee cup is one of the most important factor for great tasting coffee. A smaller cup 4-8oz generally results in a more flavourful latte or cappuccino and ideally your large coffee should be twice the size of your regular size.

### Single wall bamboo hot cups

Compostable and certified to EN13432 in industrial facilities where these exist. Australian Standard (AS4736) pending.

#### Features and Benefits

# Supporting your brand with the right packaging.

**We can support your business with our packaging for all your products. Wherever we are, we adapt and deliver packaging that meets your needs.**

You can print the Future Friendly range with your unique branding. Custom packaging is a great way of advertising your company for a fraction of the cost of other media sources. Plus with our in-house design team, we can ensure your products are perfectly in line with your current marketing imagery or create a whole new look for a new campaign.

We can supply both small local and large national businesses with our packaging. Currently we supply major national fast food retail business and franchise companies with our unique factory to store model.

## Factory to Store

Our model offers a unique vertically integrated “factory to store” solution for all national businesses. This model ensures a seamless solution and provides significant cost savings through the removal of duplications in process, products, logistics and the provision of services.

# Bags

# Brown Kraft Bags

Our Future Friendly Kraft Paper Bags are the perfect alternative to single-use plastic bags.

Available as Flat Handle, Twist Handle and Self Opening Sack (SOS), our Future Friendly Kraft Paper Bags are also **barcoded** to allow the end user to charge for their paper bag by scanning the barcode stamped at the bottom of the base.

Environmentally friendly, socially responsible and economically viable, these Future Friendly Kraft Paper Bags are made from **FSC** certified sources.

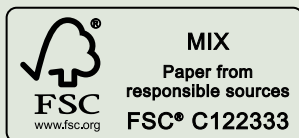

## Brown Kraft Flat Handle Bags

Put responsible and environmental values on show with our paper bags.

### Features and Benefits

- Reusable and recyclable
- Perfect for all Food Service and Delivery requirements
- Large carrying capacity (up to 15 kgs)
- Strong flat handles (18mm) allow easier carrying
- Wide bases and gussets designed to allow food containers to be easily stacked and provide stability during delivery
- Can easily be printed, stamped or have stickers applied to them to add brand messaging to your bags
